Floodwood School District Facility Improvements Near Completion

Floodwood, MN – With students and staff back in the building and the school year in full swing, the Floodwood School District's facility improvement projects are nearing completion. Following a busy summer of construction, crews are now focused on the remaining roofing and boiler work, along with final punch list items throughout the building.

The roofing project has reached its final section, with completion anticipated by the middle of October. Final connections and venting are also being completed for the new boilers, which are expected to be started up in early October. Once operational, crews will move into balancing the heating system to ensure it is operating properly throughout the building.

As these final pieces are completed, contractors continue working through punch list items and coordinating remaining activities around the school schedule to minimize or eliminate disruptions to students and staff.

The remaining work follows several months of significant improvements throughout the school. Over the summer, crews upgraded plumbing, electrical, HVAC, and other mechanical systems throughout the building. The work included new boilers and air handling units, along with new vent fans and variable air volume units to support the school's ventilation system. Interior improvements included new ceilings and finishing work in areas throughout the school, along with painting in the gymnasium. Roofing improvements, now in their final phase, round out the major facility upgrades completed as part of the project.

From the early planning and coordination through the active summer construction period, the project has focused on updating critical building systems and providing a safe, efficient, and well-maintained school facility. With the majority of the improvements now in place, the project represents a significant investment in many of the essential systems that support the school each day. As the final roofing, boiler, and punch list work is completed, the District appreciates the patience and cooperation of students, staff, families, and community members throughout the project.
