CONSTRUCTION UPDATE

Construction continues across the Middle/High School additions and renovations, with several major milestones reached. At the new performing arts center, cafeteria, and kitchen addition, most footings and foundations are complete, with the exception of the eastern exterior wall and foundations at the main entrance, which are being held to maintain the current primary access point. Steel joists have been installed throughout the PAC, kitchen, commons, and mezzanine, with the PAC catwalk structure now in place. Masonry work continues, concrete slab-on-grade pours have begun, and roof sections over the kitchen and mezzanine are complete and watertight. Construction of the PAC seating tiers has also begun, along with spray insulation and installation of underground utilities.

Renovations within the existing school buildings are also progressing. Administrative spaces in both the High School and District offices, along with the entry lobby and conference rooms, have been completed. The library and library collaboration space renovations are also complete.

The technical education addition's electrical utilities have been rerouted, with foundations, precast wall panels, masonry, concrete slabs, and roofing also in place. Renovations to the metals and woods shops are complete.

WHAT'S NEXT?

- Work will continue on the PAC addition, including seating tiers, concrete slabs, masonry, structural steel, fireproofing, and above-grade mechanical, electrical, plumbing, and fire protection systems.
- Finishing touches will be completed in the renovated administration and library spaces, while mechanical, electrical, and plumbing work continues within the tech ed addition. Site work will continue with remaining eastern parking lot improvements and curbing and paving associated with the new addition, anticipated for late fall 2026.
