May 2026 Update

Excavation for Footings & Foundations

WHAT'S NEW?

Construction is actively underway, with initial work focused on the Middle/High School addition, including the new performing arts center (PAC), cafeteria, and kitchen spaces. Sitework to date includes installation of the job trailer, construction fencing, and erosion control measures.

Specifics of this early work include removal of existing finishes along shared walls, as well as demolition of asphalt, sidewalks, and curbs within the addition footprint. Crews have also stripped topsoil and begun excavation activities, progressing into footing and foundation work. Concrete footings and foundation walls are now being formed and poured, with masonry wall installation beginning along the perimeter. Waterproofing at key areas such as the arbor well and orchestra pit is also underway to support long-term building performance.

Foundation Walls (SW corner of Addition)

NEXT STEPS

Looking ahead, structural elements will begin to take shape, with precast wall panels for the stage and fly loft scheduled for installation in mid-May, followed by structural steel erection later in the month.

Additional activity will begin on the technical education addition. Work will start with excavation and installation of footings along the existing building, followed by masonry work along the east wall of the new addition.
