Enhancing Student Wellness: New Safety Technology at Blue Ridge High School

Dear Blue Ridge Parents and Guardians,

At Blue Ridge High School, our primary commitment is to provide a safe, healthy, and focused learning environment for every student. To support this goal, we are writing to inform you that we have installed **Triton Vape Sensors** throughout our campus bathrooms and locker rooms.

These sensors are a proactive step in addressing the health risks associated with vaping and ensuring our facilities remain clean and safe for all students.

Why Triton Sensors?

The implementation of this technology allows our administration to monitor private areas where traditional supervision is not possible. Key benefits include:

- **Equitable Monitoring:** The sensors provide a fair and consistent way to monitor high-traffic areas, ensuring that school policies are upheld uniformly.
- **Privacy First:** Triton sensors do not use cameras or record audio. They are designed strictly to detect chemical signatures from vaping devices and high-decibel noise disturbances.
- **Immediate Alerts:** When a device is detected, administration is notified in real-time, allowing us to intervene quickly and provide necessary support or education to the students involved.

Our Goal: Education and Safety

Our intent is not simply disciplinary; it is centered on student wellness. Vaping is a significant health concern for adolescents, and we believe that by removing the opportunity to vape on campus, we can better support our students in making healthy choices.

We encourage you to have a conversation with your student about the risks of vaping and the importance of maintaining a drug-free campus. We appreciate your continued partnership in keeping Blue Ridge High School a top-tier environment for growth and achievement.

If you have any questions regarding this new technology, please feel free to contact the main office.

Sincerely,

Mr. Easter and Mr. Kirkton
