Preface

This report provides a complete updated demographic study and sets of enrollment projections for Community Unit School District 200 and its individual schools. I commence with a brief review and update of population and housing dynamics that have shaped District enrollment from the 1950s through the present. I then analyze recent enrollment patterns and student migration/transfer trends for District 200 and for each of its twenty schools as well as other demographic determinants of District and school enrollment changes. Finally, I project student enrollment, by grade and by year, for each of the thirteen elementary schools through school year 2026–27 and for the four middle schools and two high schools (and for the District as a whole, including the Jefferson preschool center) through 2031–2032. As before, all projections will be in the form of three separate series based on different assumptions about future resident births, housing turnover, new residential development (where possible), and family migration to each school attendance area. These three series will forecast for each school and the District as a whole, by year and by grade, (A) the minimum number of students that may be anticipated, (B) the most likely number of students to be expected, and (C) the maximum number of students that can possibly be foreseen.

In conducting the analysis that follows, I benefited from the data provided by the central administrative staff of the District and local community officials. I

would especially like to thank Dr. Brian O'Keeffe, Assistant Superintendent of Business Operations for Community Units School District 200, who coordinated all data gathering efforts at the local level. For his fine assistance and that of others who contributed information for this study, I am most appreciative.

Overview of District 200

Wheaton-Warrenville Community Unit School District 200 is a K-12 district serving Wheaton, Warrenville, and portions of Winfield, West Chicago, and Carol Stream, Illinois. It is a predominately built-out residential school district, covering just over twenty-five square miles, thirty miles west of downtown Chicago, and adjacent the Illinois Research and Development Corridor. More than 80,000 people reside within the area served by District 200, including a large population of commuters to downtown Chicago and professionals who work along the high technology corridor between Argonne and Fermi National Laboratories.

The District serves approximately 11,700 students in thirteen grade K-5 elementary schools plus a preschool center, four grade 6-8 middle schools, and two grade 9-12 high schools. Students come from diverse family backgrounds, including a growing number of students for whom English is a second language. In 2021, 37.3 percent were racial/ethnic minorities including 17.4 percent of the student body who were Hispanic, up from 5.2 percent in 2000, 8.7 percent Asian, 6.3 percent black, 4.7 percent two or more races, and 0.2 percent other minority. District 200 schools have an excellent reputation, ranking highly in Illinois and national surveys of academic quality.

Housing and Population Trends

Like many of Chicago's well-established suburbs, the District 200 area experienced a flurry of new housing construction from the 1950s to the 1980s (see Table 1). The vast majority of these homes were single-family, detached structures containing three or more bedrooms. Furthermore, these homes were reasonably priced. Table 2 shows that as late as 1970 the median value of owner-occupied houses in Wheaton was \$29,000 and just \$20,800 in Warrenville. By 2000, housing costs were still modest by Chicago suburban standards with the median value \$222,100 in Wheaton and \$148,900 in Warrenville. Housing prices did appreciate rapidly during the first eight years of this century, before moderating following the national recession and local housing downturn.

The substantial amount of construction of modestly priced, detached homes from the 1950s to the 1980s attracted large numbers of younger couples with preschool and school-age children to the District. Moreover, most of these couples had at least two children.

Table 3 describes the population trends since 1950 for the communities served by District 200. Between 1950 and 1960, Wheaton more than doubled from 11,638 residents to 24,312. Total population in Wheaton continued to climb to 31,138 in 1970, 43,043 in 1980, 51,464 in 1990, and 55,416 in 2000. The 2010 Census showed Wheaton declined to 52,894 residents, followed by a slight rebound to an

estimated 53,270 in 2019, the latest year for which population counts are available.

Warrenville expanded from 1,891 in 1950 to 3,134 in 1960. Growth in Warrenville slowed somewhat in the 1960s, but picked up again in the 1970s and 1980s, reaching 11,333 in 1990 and 13,363 in 2000. Like Wheaton, the 2010 Census showed Warrenville experienced a slight decline to 13,140 residents, followed by relative stability through in 2019.

Population trends are similarly shown in Table 3 for Winfield, Carol Stream, and West Chicago. Discussion for this report will focus, however, on the primary communities served by District 200, Wheaton and Warrenville.

More important than total population numbers, however, are the changes in the preschool and school-age populations in District 200's communities. In Wheaton, for example, preschool population (under age 5) began to decline in the mid-1960s (the end of the Post-War baby boom) and slowly recovered to just above the 1960 number in 1980. With mortgage interest rates falling in the mid-1980s (after double-digit highs in the early 1980s) and with growing numbers of empty nest households, housing turnover accelerated and more young families began to move into the District, despite appreciating housing costs. Sustained lower interest rates, together with a solid rebound in the Chicago area economy, led to continuing housing turnover to younger families with school-age children during the 1990s. As a result, in Wheaton, for example, preschool (under age 5)

population expanded from 2,934 in 1980 to 4,048 in 1990, while the population aged 5-9 grew from 2,987 to 3,958.

Between 1990 and 2000, though, Wheaton's under age 5 population dropped by over 500 children, down to 3,517. At the same time, Warrenville's under age 5 population declined by 240 children from 1,248 in 1990 to 1,008 in year 2000. These drops in preschool population were precursors of declines in future elementary school students and eventually middle school and high school students.

During the 2000 to 2010 period, Table 3 shows that all preschool and school-age cohorts declined in both Wheaton and Warrenville. There were particularly significant drops in the under age 5 populations in the two villages. It was only because housing turnover remained relatively robust that District kindergarten populations did not experience major declines. Housing turnover gave a modest boost to Wheaton's under age 5 population through 2019, though its age 5-9 and age 10-14 populations continued to decline slightly. Warrenville's preschool age as well as elementary school and middle school populations also declined modestly through 2019.

The housing crisis and ensuing recession that began in 2008, along with limited available land, depressed new housing construction in Wheaton and Warrenville. Single- and multi-family unit housing permits are shown annually for District 200 communities between 1998 and 2021 in Table 4. Some of these

permits were for teardowns and rebuilds, mostly concentrated in the north of the District. Table 4 illustrates a modest recovery in new housing construction after 2012, restricted by the fact that most of District 200 is at or close to residential build-out.

District Enrollment Trends

Overall enrollment trends in District 200 schools since the 1950s mirrored new housing development, housing turnover, and family migration to the Wheaton-Warrenville area. As may be observed in Table 5, the 1950s and 1960s witnessed explosive District growth, with total enrollment climbing from 5,517 in 1958-59 to 11,140 (excluding ODSE and pre-K) in 1970-71. During the early 1970s, District enrollment growth slowed and (excluding ODSE) peaked at 11,891 students in 1975-76. Total K-12 enrollment declined for the next eight years, down to 9,845 in 1983-84. For the next nineteen years, District 200 K-12 enrollment steadily climbed, reaching 14,261 students in the 2001-02 school year. Total enrollment then declined fairly consistently thereafter to 11,436 last fall, again, excluding ODSE and pre-K.

Breakdown of enrollment trends since 1958 by elementary school, middle school, and high school grades reveals the impact of the higher fertility rates of the 1950s and early 1960s, together with the substantial in-migration of families with preschool and school-age children, followed by a decline in both during the 1970s. Table 5 provides enrollment trends in school level groupings (despite changing grade organization), whereas Table 6 presents enrollment trends based on constant grade organization. Enrollment in the elementary schools, which stood at 3,271 in 1958-59, expanded to 6,023 in 1972-73. Elementary school enrollment then steadily declined to 4,412 students in 1983-84, before

recommencing annual growth for the following fourteen years to 6,776 students in 1997–98. Since then, total elementary school enrollment dropped in all but three years down to 4,973 students last fall.

Total kindergarten enrollment tends to be a rough harbinger of overall enrollment change. Observed in Table 6 that total District 200 kindergarten has generally trended downward, especially since school year 2012–13.

Junior high/middle school enrollment rose from 753 students in 1958–59 to 2,017 students in 1973–74 and then declined to 1,561 students in 1980–81. Following grade reallocation, total junior high/middle school enrollment jumped to 2,297 in 1983–84, then stabilized near 2,100 for the following four years before recommencing annual growth for the next fourteen years to 3,470 students in 2001–02. With the expected lag behind declining elementary school enrollments, total middle school enrollment declined for most of the past twenty years, registering 2,674 students this past fall.

Total high school enrollment mushroomed from 1,493 students in 1958–59 to 4,121 students in 1975–76, before commencing a decline to just under 3,100 students in 1988–89. For sixteen years thereafter, total enrollment in the high schools expanded annually, reaching 4,662 students in 2005–06. The smaller numbers of District 200 middle school students in the pipeline eventually lowered total enrollment in the high schools the past sixteen years, with 3,789 students registered this past fall.

Determinants of Enrollment Change

School districts are open demographic systems whose growth, stability, or decline is affected by three basic factors. The first is the difference between the size of the district's exiting (graduating) twelfth grade class each June and the size of the newly entering kindergarten class that replaces it in the system the following September. The second is the net migration and retention of school-age children as they progress through the grades over the years. The third is the change in the number of pre-K students.

Tables 7, 8, and 9 show how total annual enrollment change in the District can be decomposed into these three basic components since fall 1987. Table 7 provides the grade-by-grade and year-by-year enrollment for the District from school year 1987–88 to 2021–22. Table 8 decomposes the annual enrollment changes into its three basic components. Thus, between September 2020 and September 2021 (school years 2020–21 to 2021–22), total District enrollment declined by 119 students (11,805 to 11,686, excluding ODSE). The 949 seniors who left the District in June 2021 (school year 2020–21) were replaced in September 2021 by 755 kindergarten students for a 194 net student loss (see Table 7). In addition, between the two school years, 47 more students either migrated into the District or transferred from private or parochial schools to District 200 schools than migrated out of District 200, dropped out, or transferred to private or parochial schools. During this same period, pre-K students

increased from 222 in fall 2021 to 250 students in fall 2022 for a net gain of 28. These three components (-194, +47, +28) sum to the precise 119-student loss between school years 2020–21 and 2021–22.

Observe in Table 8 that the primary driver of overall enrollment decline after 2001 was relatively smaller entering kindergarten classes compared with the previous year's graduating twelfth grade classes. The exceptional +182 migration/transfer gain between September 2001 and September 2002 is an artifact of special education student counts being administratively shifted to the regular grades and -289 net student migration/transfer loss between September 2019 and September 2020 due to COVID-19 impacts.

Table 9 decomposes the student migration/transfer data by grade and by school year from September 1987 to September 2021. The bottom left-hand cell of “59” means that, as the kindergarten class of school year 2020–21 progressed to the first grade this school year (2021–22), it gained 59 students (see Table 7 where kindergarten enrollment in school year 2020–21 was 810 and first grade enrollment in school year 2021–22 is 869). Conversely, as the second-grade class in 2020–21 became the third-grade class in 2021–22, it shed 15 students (802 to 787). Summing across the columns gives 47, which is the total net student migration/transfer between September 2020 and September 2021.

Annual enrollment numbers between September 1987 and September 2021 for each of the schools in District 200, along with the decomposition of their

annual sources of enrollment change and annual grade-by-grade migration/transfer, are provided in Appendix A. Interpretation of these tables is virtually identical to that described for the District as a whole. Therefore, elaboration is not necessary here and I shall therefore proceed directly to the projections.

Before proceeding, though, I should note that CUSD 200 is trending towards more demographic diversity. Appendix B provides the racial/ethnic composition of each District 200 elementary school, middle school, and high school annually from 2000 to 2021. In addition, it shows the district-wide student racial/ethnic composition for these years.

Future Enrollment in the Schools and the District as a Whole

In projecting enrollment for District 200 schools, two sets of interrelated factors play central causal roles. The first is future births to residents and resulting family sizes. Any changes in fertility rates during the next five years will not affect either the middle schools or high school enrollment projections. This is because youngsters who will enter these school grades through school year 2031–32 are already born. Fertility changes will not affect the elementary schools until after 2026–27; again, because children who will be reaching kindergarten during the next five years are already born. Fertility rate changes during the next five years could affect pre-K enrollment sooner as well as elementary school enrollments beginning with the school year 2027–28. However, information on fertility rates of middle-income suburban families suggests that there will be little change during the next five years. The one factor that could play a role, though, is greater in-migration of Hispanic families who have higher fertility rates, a District 200 trend noted earlier in this report.

The second, and most critical factor, for the future enrollment in District 200 schools is net student in-migration resulting from new housing development (including teardowns and rebuilds) in selected attendance areas and, far more importantly, the turnover of existing housing units. Because future family migration patterns in the District could vary substantially, predicated on

the degree of new housing development and especially housing turnover, three sets of enrollment projections will be provided for each school and for the District as a whole. Projections will be presented in the form of separate series based on the following assumptions:

Series A Enrollment projection assuming future fertility rates remain relatively stable (through 2026), future new residential development (where possible), and turnover of existing housing units in each attendance area to families with preschool and school-age children *are less than anticipated* through 2031;

Series B Enrollment projection assuming future fertility rates remain relatively stable (through 2026), future new residential development (where possible), and turnover of existing housing units in each attendance area to families with preschool and school-age children *occur as anticipated* through 2031;

Series C Enrollment projection assuming future fertility rates remain relatively stable (through 2026), future new residential development (where possible), and turnover of existing housing units in each attendance area to families with preschool and school-age children *are greater than anticipated* through 2031.

Although the lower and upper parameter limits of projected enrollment change will vary from school attendance area to school attendance area, predicated upon housing turnover and possible new housing development, Series A projections will assume, on average, that the amount of housing turnover and new residential development will be 15 percent below anticipated amounts; whereas, Series C will assume, on average, that housing turnover and

new residential development will be 15 percent greater than the amounts currently anticipated.

Updated enrollment projections, by grade and by year, will be provided for each elementary school through 2026–27 and for the combined elementary schools through 2031–32. Middle school (grade 6–8) enrollment will be projected for Edison, Franklin, Hubble, and Monroe through 2031–32. Enrollment will be projected for Wheaton North and Wheaton-Warrenville South High Schools, by year and by grade, through 2031–32, as will total District enrollment. Series A, Series B, and Series C projections will be provided in all instances.

The basic methodology used to make the three series of enrollment projections is a modified cohort survival procedure. Average cohort progression numbers (similar to those presented in the student migration/transfer tables for the District and the schools) were computed for each grade transition over the past four years. These average progression numbers were adjusted for any perturbations (dramatic single year inconsistencies) and then applied to compute baseline enrollment projections (via conventional cohort survival techniques) for each school. The sizes of the entering kindergarten cohorts were estimated based on recent kindergarten enrollment patterns in the individual elementary schools and birth trends to residents of District 200 communities served by each elementary school along with new housing development forecasts.

It should be reiterated here that entering kindergarten enrollments at a number of elementary schools have been volatile. Given COVID-19 impacts, in the past two years a number of elementary schools experienced out-of-line jumps while others had significant declines. Cap-and-send policies based on available classroom space likewise affected some kindergarten grade sizes and also migration/transfer patterns for a few schools. This makes forecasting future kindergarten enrollments at these schools difficult and also diminishes the accuracy of projections for schools impacted by cap-and-send. I have done my best to adjust for these anomalies, but recommend that the elementary school projections be updated fairly frequently to capture these dynamics.

Table 10 provides updated information on annual births to residents of the communities served by District 200 between 1990 and 2009 (the last year for which village resident birth data is available) and estimates thereafter based on resident births in local ZIP code areas. Our sensitivity analysis of historic data showed that the sum of births to residents in ZIP codes 60187, 60189 and 60555 has been about 48 greater than the sum of Wheaton and Warrenville. Focusing on Wheaton and Warrenville, note the considerable drop in the number of births to residents between 1999 and 2009. The ZIP code births indicate that since 2009, births to residents have been relatively stable. This, together with anticipated future “empty nest” housing turnover, would suggest that kindergarten

enrollments will remain stable and possibly even increase slightly in the decade ahead.

The next step was to adjust projected enrollment each year in grades 1 through 12 for anticipated new residential development (including teardowns and rebuilds) and net student migration/transfer. New housing development estimates were provided for the school attendance areas by local developers and municipal officials.

Since District 200 is largely built out, only limited new single-family housing development is anticipated over the coming decade with the exception of the Bower attendance area and especially Pulte's Naper Commons development in the Whittier attendance area. Some townhouse and multifamily development is expected to continue in a few attendance areas which tend to yield on average fewer children than single-family units. There may well be other scattered new housing development over the coming decade not currently envisioned.

Teardowns of smaller homes and replacements by larger ones have been occurring in the District over the years, especially in the Hawthorne, Lowell, Longfellow, and Washington attendance areas, but also in Emerson, Lincoln, Madison, and Whittier attendance areas. In addition, the diversity of the student population has increased as Hispanic families (some with larger families) moved

into more affordable complexes in the Bower, Johnson, Sandburg and Washington attendance areas.

For District 200 communities as a whole, the former Northeastern Illinois Planning Commission (NIPC; now the Chicago Metropolitan Agency for Planning) predicts modest longer-term population growth (see Table 11 for 2030, 2035 and 2040 forecasts). By 2040, total population in Wheaton is forecasted to reach 58,596 up from 52,598 in 2020, while Warrenville is expected to reach 15,621 or approximately 1,700 above its year 2020 population estimate of 13,909.

Series B projections (the most likely) were made following the methodology described above, taking into account estimated future kindergarten enrollments and anticipated family in-migration to each attendance area as a result of new housing development and housing turnover (including teardowns). Series A projections were computed in a similar manner to Series B, except that downward adjustments were made for student in-migration, assuming a lesser amount of new residential development and/or housing turnover in each attendance area than is assumed in Series B. Series C projections were also computed in a manner similar to Series B, except that adjustments assumed that housing turnover (including teardowns and rebuilds) would be greater than currently anticipated and that some additional new single-family and multi-family units not currently envisioned would be completed.

Pre-K and pre-K special education classes are difficult to project. My experience with numerous districts in the Chicago suburban area suggests that neither pre-K nor special education enrollment change is correlated with any school district attributes, even its overall enrollment growth or decline, as has been the case in District 200. I will therefore apply my best professional judgment in estimating pre-K students, again, guided by their recent numbers.

In projecting middle school enrollments, it was necessary to allocate future progressing fifth grade classes from each elementary sending school to the sixth grade at the likely receiving middle school. The sending elementary school allocation percentages used for each middle school are shown in Table 12 and Figure 1, as are the allocations of the four middle schools to North and South High Schools.

as of School Year 2016–17

Enrollment Projections

Tables 13A through 25C provide enrollment projections for each elementary school, by year and by grade, through 2026–27 under the three sets of assumptions described above. Because the precise grade-by-grade numbers projected may be clearly observed in each table for each projection series, I will comment here on total enrollments projected for each school under Series B, which is the most likely.

Should future new housing development, housing turnover and resulting in-migration of families with preschool and elementary school-age children occur as anticipated, the Series B projections show that Bower will remain relatively stable for the next five years at just under this year's count of 439. Emerson is likewise projected to be stable slightly below its September 2021 enrollment of 259. The same stability is expected at Hawthorn Elementary School though it could edge up in 2026–27 to 184 students compared to its fall 2021 count of 175. Johnson is similarly projected to rise slightly from 455 students this past fall to 489 students in 2026–27. Conversely, Lincoln is projected to decline slightly over the next five years from 441 this year to near 425 in 2026–27. Longfellow should stay quite close to its current 336 enrollment. Lowell is projected to modestly decline for the next two years from 259 in fall 2021 to 231 students in 2023–24 then roughly stabilize just above that number through 2026–27. Madison is likewise projected to modestly dip over the next two years

from 409 students presently to 387 students in 2023–24 before edging back to 403 students in 2025–26. Pleasant Hill is projected to decline from this past fall's 553 enrollment to 502 students in 2026–27. Sandburg should remain essentially stable just under its current 382 count through 2026–27. Washington will modestly decline from 371 students this year to 346 students in 2026–27. During this same period, Whittier impacted by Naper Commons development, should grow from its current enrollment of 417 to 464 students in 2026–27. Finally, Wiesbrook is projected to slightly rise from 477 students this past fall to 493 in 2025–26 before slipping back to 470 students in 2026–27.

In projecting middle school enrollment for the next 10 years, it is assumed that all graduating students from Lincoln, Madison, and Whittier will attend Edison Middle School (see Table 12 and Figure 1). Franklin Middle School will receive all students from Hawthorne, Longfellow, Lowell, and a majority from the Washington attendance area. All of Bower, Johnson, and Wiesbrook are assumed to attend Hubble Middle School. Monroe Middle School is assumed to receive all students from Emerson, Pleasant Hill, Sandburg, as well as a portion from the Washington attendance area.

Table 26B shows that under the Series B (most likely) assumptions, enrollment at Edison will edge up from 660 last fall to 675 students in 2023–24. Total enrollment at Edison will then drop to 604 students in 2025–26 before rebounding to 652 students in 2030–31, then stabilizing. Under Series A (low

growth; Table 26A) assumptions, Edison's enrollment will decline to 523 students ten years from now with virtually all the drop occurring during the next five years. Under Series C (high growth; Table 26C) assumptions, Edison's enrollment would climb to 786 students in 2031–32 before stabilizing.

Table 27B shows that under Series B (most likely) assumptions, total enrollment at Franklin, currently at 600 students, will drop to 466 students in 2026–27, and then stabilize at just above that number through 2031–32. If family in-migration is less than currently anticipated (Series A; Table 27A), Franklin's enrollment could drop down to 310 students in 2031–32, which I do not view as likely. Should housing development, housing turnover, and family in-migration trends accelerate beyond that currently anticipated (Series C; Table 27C), total enrollment at Franklin would be basically stable next year, then decline to 567 students in 2024–25 before steadily rising to 658 students in 2030–31.

The projections for Hubble School are presented in Tables 28A through 28C. Under the most likely assumptions (Series B), Hubble's enrollment will be stable next year near its current 706 number then dip to 667 students in 2023–24. Total enrollment will then climb to 721 in 2026–27 and stabilize at slightly under that number through 2031–32. The Series A (absolute minimum) projection shows that Hubble's enrollment could decline to 561 students in 2030–31 before stabilizing. If new housing development and housing turnover expectations and resulting family in-migration are exceeded (Series C), total enrollment at Hubble

would be relatively stable for the next two years, then rise to 847 students in 2031-32.

Monroe's projections are shown in Tables 29A through 29C. Should new housing development and housing turnover in the areas served by Monroe occur as anticipated, total enrollment in this middle school will decline from 708 this year to 645 students in 2024-25. Following three years of relative stability, Monroe's enrollment will decline to 595 students in 2029-30 and then edge back to 619 students in 2031-32. Under low-growth assumptions (Series A), total enrollment at Monroe would drop to 472 students in 2031-32. Under high growth Series C assumptions, total enrollment at Monroe would still drop to 698 students next year then rise to 773 students in 2026-27 before stabilizing near that count.

Tables 30A through 31C provide enrollment projections under the three sets of assumptions for Wheaton North High School and Wheaton-Warrenville South High School. If new housing development and housing turnover occur as anticipated (Series B, Table 30B), total enrollment at Wheaton North High School will drop from last fall's 1,943 students to 1,507 in 2030-31. Should new housing development and housing turnover and resulting family in-migration be lower than expected (Series A), total enrollment at Wheaton North High School could decline over the coming decade to just 1,101 students in 2031-32 which is the absolute minimum that can be foreseen. Conversely, should new housing

development and housing turnover and resulting family in-migration accelerate beyond that anticipated (Series C), total enrollment at Wheaton North High School would rise to 1,984 students in 2024–25 then dip to 1,877 students in 2027–28 before fluctuating around that number through 2031–32.

If housing dynamics in the District occur as expected (Series B, Table 31B), Wheaton-Warrenville South High School's enrollment will remain at or very near its present 1,846 count next year then rise to 1,912 students in 2025–26. South's total enrollment should then decline to 1,835 students in 2027–28 before stabilizing at just above that count through 2031–32. The Series A (absolute minimum) projection (Table 31A) shows that total enrollment at Wheaton-Warrenville South High School would decline to 1,548 students in 2029–30 and leveling off. Should new housing development, housing turnover and resulting family in-migration exceed expectations (Series C), total enrollment at Wheaton-Warrenville South High School would climb to 2,229 students in 2031–32.

It is possible to gain more reliability and a better handle on where the District as a whole is heading by projecting combined school enrollments, by year and by grade, through 2031–32. These projections, under Series A, Series B, and Series C assumptions, are provided in Tables 32A, 32B, and 32C, respectively. Since they were done completely independently of the individual school projections, they will not equal the sum of the individual schools for each series. In particular, the Series A and Series C projections will be tighter than the

individual school sums of the Series A or Series C since all schools will not likely follow Series A or Series C simultaneously. The Series B aggregate projections will be close to the Series B sums of individual schools, though.

Under Series B assumptions (Table 32B), total District enrollment (including preschool at Jefferson) will continue drop from 11,686 last fall to 10,683 students in 2029–30. Total District enrollment will roughly stabilize thereafter. In my opinion, District 200 total enrollment will most closely track the Series B projection numbers.

Assuming a significant slowdown in future student in-migration, Series A (Table 32A) shows that total District 200 enrollment will decline to 9,961 students in 2029–30 and level off near that number. Again, Series A represents the minimum number that can be foreseen. However, should net student in-migration accelerate beyond that presently expected, Table 32C (Series C) reveals that total District 200 enrollment (including preschool at Jefferson) will remain fairly stable during the coming decade.

Tables 33A, 33B, and 33C provide the aggregate district-wide K–5, 6–8, and 9–12 forecasts for District 200 under the three sets of assumptions. Historical and projected total enrollment by grade groupings under the three sets of assumptions are also illustrated in Figures 2 through 5. The basic conclusion to be drawn is that overall enrollment decline will likely continue to characterize the District at the elementary school, middle school, and high school levels for

the next five years. These declines will not be as sharp though as some years in the recent past and greater enrollment stability should set in after 2026–27.

Concluding Remarks

As I stated previously, no demographer has a crystal ball. In this updated report, I have assembled the best information presently available and applied professional techniques and judgment to generate enrollment projections for District 200 and the individual schools. These projections should be monitored and updated regularly (at least once every three years) to ensure that policy decisions are based on the latest and most reliable figures, especially given COVID-19 impacts and fluctuating kindergarten enrollments that destabilize elementary school forecasts. At this time, it is my hope that the projections and all other demographic information contained in this report will be useful to District 200's Board of Education, administrators, teachers, and concerned citizens as plans are made for future space and staff needs in the District.

John D. Kasarda, Ph.D.
