INFORMATION REGARDING ADMINISTRATION OF MEDICATION IN SCHOOL

A. DISTRICT 200 POLICY

Parent(s)/guardian(s) are responsible for administering medication to their children. Administering medication during school hours or during school-related activities is discouraged unless it is necessary for the educational benefit and/or critical health and well being of the student. Acknowledging that occasionally a necessary medication must be administered during the school day, the District shall administer the medication. If a nurse is unavailable to administer the medication, a building administrator or a designee who volunteers to administer the medication will either: a) supervise the self-administration of the medication; or b) administer the medication to the student.

Parents/guardians are encouraged to be present and to administer required medications (e.g., insulin, inhalers, epinephrine, etc.) to their child during school sponsored field trips and extracurricular activities (e.g., athletic events, musical concerts, performances, etc.) when their child has not yet been approved to independently self-administer their medication. In the event that a parent/guardian will not be present to administer their child's required medication during a school sponsored field trip or extracurricular activity, the parent/guardian must notify the Principal at least five (5) days prior to the scheduled event so that District 200 may appoint another party to serve the child in this capacity. Doctors, parents and school staff will discuss when a student is able to independently administer medication and no longer needs the assistance of a parent or school staff member designated to assist in care of medical needs (i.e., delegated care aide).

Nothing in this policy shall prohibit any school employee from providing emergency assistance to students, including administering medication.

B. PARENT RESPONSIBILITIES

- 1. All prescription and non-prescription (e.g., Tylenol, Advil, cough medicine, cough drops, cold remedies, etc.) medications given at school require a doctor's order and parent permission. Parent/guardian must provide a completed "Authorization for Administration of Medication in School" form each school year for the administration of prescription and non-prescription medications.
- 2. The student's parent or guardian must renew written orders for continuing medications at the beginning of the school year and whenever a change in the child's medication or health occurs or upon request of the school nurse. The school must receive an updated physician's order in writing before the new dosage can be given.
- 3. Medication must be provided in its original container labeled by the pharmacist with the student's name, medication, and dosage as it is to be given at school. A second small labeled container is required to allow a student to receive their medication on events outside the school building.
- 4. Medications must be brought to school by a parent or a designated adult and are never to be sent to school with the student. Properly documented asthma, epinephrine and diabetes medications are an exception to this guideline when the student has been approved to self-administer such medications.
- 5. Self administration of asthma inhalers is permitted without a doctor order, but requires the *student's* prescription label, which must contain the name of the medication, the prescribed dosage, and the time at which or circumstances under which the medication is to be administered and parental signature on the District's Authorization for Administration of Medication in School form. (See Guidelines below).
- 6. The initial dose of any medication should be given at home.
- 7. Medications and special items necessary to administer medications (such as syringes and hypodermic needles) must be supplied by a parent or guardian and will be stored in an appropriate separate locked area.
- 8. In the event that a parent/guardian is not able to administer his or her child's required medication during a school sponsored field trip or extracurricular activity and the child has not yet been approved to independently self-administer their medication, the parent/guardian must notify the Principal at least five (5) days prior to the scheduled event so that District 200 may appoint another party to administer required medication for the child.

C. GUIDELINES FOR SELF-ADMINISTRATION OF MEDICATION

- 1. Proper documentation (Authorization for Administration of Medication in School form) must be completed before a student is allowed to carry self-administered medications (*e.g.*, inhaler, insulin, epinephrine, etc.). Students are not permitted to keep medication on their person or in their lockers unless authorized to possess and self-administer medication due to risk of anaphylaxis or an asthmatic or diabetic condition.
- 2. The student who participates in self-administration of medication must demonstrate consistent responsibility in:
 - A. Understanding when it would be medically appropriate to take medication.
 - B. Knowing how to administer the medication and how frequently it can be taken.
 - C. Being familiar with expected effects and possible side effects of the medication.
 - D. Understanding that medication is not to be shared with anyone.
 - E. Seeking additional help from the teacher or health office if symptoms persist or if student is experiencing side effects after administering medication .
- 3. The student's name must be marked on the medication in case it is misplaced.
- 4. The school will not keep a record of medication administration for the student.
- 5. Students will be allowed to self-administer approved medication under the supervision of school personnel during the school day, at school sponsored activities and at before or after school activities.
- 6. 911 will be called after epinephrine is administered. Student must notify the teacher/nurse.
- 7. The privilege to self-carry and self-administer medication will be revoked for safety reasons if the student does not demonstrate appropriate responsibility.
- 8. District 200 is committed to supporting capable students, assuming appropriate parental and medical authorization is provided, in becoming independent in their ability to self-administer epinephrine, an asthma inhaler and insulin to treat their medical condition.
