Subject: Summer Floor Tile Removal and Replacement Project

Dear Parents, Guardians, Faculty, and Staff,

As part of our ongoing commitment to maintaining a safe, healthy, and well-maintained learning environment, we will be conducting a floor tile removal and replacement project during the summer recess period in Rooms 210, 212, 215, and 217 at Cherry Hill School.

The project involves the removal of existing floor tile and mastic that have been identified as non-friable asbestos-containing materials (ACM). Non-friable materials are materials in which asbestos fibers are bound within the product and are not easily released into the air when left undisturbed. The removal work will be performed in accordance with all applicable federal, state, and local regulations governing asbestos abatement activities.

To ensure the safety of students, staff, contractors, and visitors, the following measures will be implemented:

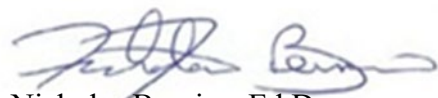

- All abatement activities will be completed in the evening after students and staff leave the building.
- All work will be performed by a licensed asbestos abatement contractor.
- Work areas will be isolated and secured to prevent unauthorized access.
- Engineering controls and standard work practices designed to minimize airborne dust and fiber release will be utilized throughout the project.
- Air monitoring and clearance testing will be conducted upon completion of the project.

The project is scheduled to begin on or about June 23, 2026, and is expected to be completed by July 1, 2026.

If you have any questions regarding this project, please contact Alex Gomez, Building and Ground Supervisor, at gomez@riveredgeschools.org.

Thank you for your cooperation and understanding as we complete these important facility improvements.

Sincerely,

Nicholas Bernice, Ed.D.
Superintendent of Schools
