John Glenn High School Receives Education Mini Grant for Hands-On Math Project

Bay City, MI — Bangor Township Schools is pleased to announce that John Glenn High School has received a $405 Education Mini Grant from the Bay Area Community Foundation to support an innovative math project for students.

The grant will fund "From Shadows to Heights: A Real-World Trigonometry Project," created by John Glenn High School math teacher Andrea Sobiesiak. The project will give 9th–11th grade students the opportunity to apply trigonometry concepts by measuring shadows and angles around the school campus to calculate the heights of real-world objects.

Students will work collaboratively to collect data, complete calculations, and present their findings through visual presentations, helping them see how math is used beyond the classroom.

The project is scheduled to run from March 23 through May 22, 2026.
