

DOUGLAS BYRD HIGH SCHOOL

Academy of Green Technology CCS Choice Program

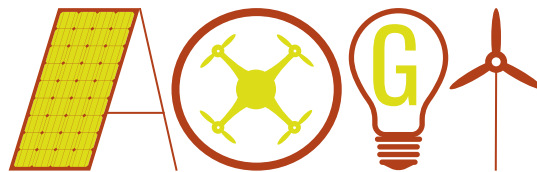

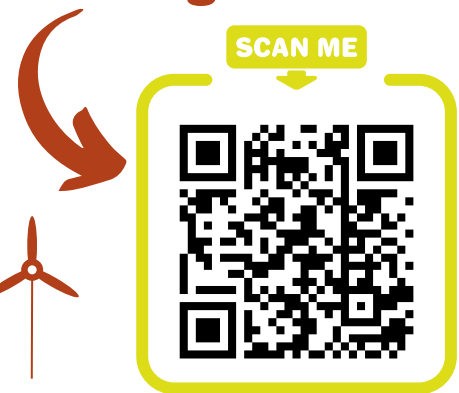

The Academy of Green Technology's key objectives are to assist students in preparing for careers in a globally connected, technology-driven workforce, with a focus on alternative energy and sustainability. It is difficult to identify any sector of the economy that is not affected by those two issues. The academy's goal is to provide students with key skills, knowledge, and job experience needed for future college and job success, whether directly or indirectly related to green technologies. Academy students enroll in a combination of high school and community college courses, affording the opportunity to earn 17+ hours of college credit toward the FTCC certificate in Introduction to Photovoltaic Systems or Green Sustainable Architecture.
