Center for Career Services

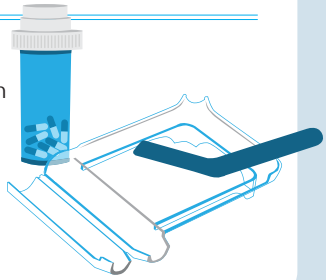

NEW PROGRAMS

We're exciting to annouce the creation of three new programs that have been added to the CTE Catalog.

Pharmacy Technician

Students gain hands-on experience in the science of pharmacology, dosage calculations, and the preparation of medications in retail, hospital, and laboratory settings, all while emphasizing the highest standards of patient safety, pharmacy law, and inventory management.

Upon completion of this program, students are prepared to sit for the Pharmacy Technician Certification Exam (PTCE), earning a professional credential that is highly valued in New York's medical community.

Cybersecurity

The Cybersecurity program prepares students to become the first line of defense against global cyber threats. This course dives deep into the principles and practices of protecting networks, securing sensitive data, and identifying system vulnerabilities.

By the end of the program, students will be positioned to earn industry-recognized certifications and gain the technical expertise required for high-demand cybersecurity roles.

Exercise Science & Sports Medicine

Designed for students passionate about human performance and wellness, the Exercise Science & Sports Medicine program explores the mechanics of the human body and the science of athletic recovery. Students gain a comprehensive understanding of anatomy, physiology, and kinesiology, applying this knowledge to injury prevention, emergency care, and rehabilitation.

The lab-intensive environment allows students to practice fitness assessments, design personalized training programs, and utilize professional-grade diagnostic and therapeutic equipment. The program balances rigorous scientific study with practical application in fitness assessment.

Please note: The programs listed above will be located at White Plains High School's "New" Innovation Wing, a separate site from the Careers campus in Valhalla. Participating school districts are responsible for providing transportation for students enrolled in these programs.
